

Provisional estimates indicate that the Gross Domestic Product (GDP) for the first quarter this year amounted to €1,416.9 million, an increase of 7.0 per cent compared to the corresponding period last year. In real terms, GDP increased by 3.4 per cent.

## Gross Domestic Product for Q1/2010

Cut-off date:  
**3 June 2010**

### The Production Approach

During the period under review, growth in value added was primarily generated by two sectors: financial intermediation and other community, social and personal service activities. Increases were also registered in education; health; hotels and restaurants; real estate, renting and business activities; public administration; and wholesale and retail trade. The manufacturing sector registered its highest value added in five quarters.

Declines in value added were observed in transport, storage and communication; construction; mining and quarrying; and electricity, gas and water supply.

Table 3 illustrates the generation of GDP by industry.

### The Expenditure Approach

The measurement of GDP from the expenditure approach indicates that GDP at constant prices went up by 3.4 per cent compared to the corresponding period last year, as shown in Table 9. Total final consumption expenditure in real terms decreased by 0.2 per cent. Gross fixed capital formation at constant prices declined by 5.0 per cent. Real exports and real imports experienced increases. Details on developments in the Expenditure Approach components of GDP are shown in Tables 5 to 8.

### The Income Approach

The change in GDP at current prices, amounting to €92.6 million, is estimated to have been distributed into a €3.5 million decline in compensation of employees, a €61.2 million rise in gross operating surplus of enterprises, and a €34.9 million increase in net taxation on production and imports, as shown in Table 1.

### Gross National Income

Considering the effects of income and taxation paid and received by residents to and from the rest of the world, Gross National Income (GNI) at market prices for the first quarter this year is estimated at €1,364.2 million ■

## Methodological Notes

1. All data in this News Release are in line with the European System of Accounts (ESA 95) Manual (ISBN 92-827-7954-8). This system of accounts is mandatory for all EU Member States. The accounts are subject to audit by the European Court of Auditors and Eurostat's GNI Committee to ensure reliability, comparability and exhaustiveness.
2. All data in this release should be considered as provisional and therefore subject to revision.
3. Data users must be aware that the industrial activities of General Government are spread over 12 different NACE categories (at A60 level) and include local councils and extra-budgetary units that are financially dependent on Government. NACE 75 is the largest category and, in terms of gross value added, represents approximately 36 per cent of the General Government sector in 2009.
4. In all tables, data denominated in euro for the 2004-2007 period is arrived at by using the fixed exchange rate (Lm0.4293=€1) for the entire series. This is in line with Eurostat's proposal and is done so as not to distort growth rates in Maltese Liri. Figures may not add up exactly due to rounding.
5. Malta's Gross National Income (GNI) Inventory is a 356-page document containing the sources and methods used for the compilation of the Gross Domestic Product (GDP) and the GNI based on the European System of Accounts (ESA 95). The document is available online: <http://www.nso.gov.mt/site/page.aspx?pageid=344>
6. Government subsidies in favour of Enemalta Corporation have been classified as subsidies on products (D.31) from subsidies on production (D.39), since these are given to influence the price at which the output is sold. Subsidies on products are given so that companies charge prices that are lower than their average cost of production as a matter of deliberate government economic and social policy. This reclassification does not affect the aggregate GDP level.
7. As from Q1/2008, Malta Shipyards Ltd. has been reclassified within the General Government Sector. On 12 May 2009, a press information notice provided details on the methodological treatment of this reclassification according to ESA 95. This document is available online: [http://www.nso.gov.mt/docs/The\\_effect\\_of\\_the\\_reclassification\\_of\\_Malta\\_Shipyards\\_Ltd.pdf](http://www.nso.gov.mt/docs/The_effect_of_the_reclassification_of_Malta_Shipyards_Ltd.pdf)
8. Quarterly data for 2004 to 2006 are available from NSO upon request.

Gross Domestic Product (GDP) is an estimate of the value of goods and services produced in the economy over a period of time. The GDP is estimated at current prices using the Production Approach, aggregating the output of the various productive sectors net of the cost of intermediate inputs. The Expenditure Approach is reconciled with the Production Approach and is used to derive an estimate of GDP at constant prices, in other words, excluding the effects of price inflation on market prices. The Income Approach shows how GDP at market prices is distributed into compensation of employees, operating surpluses of enterprises and taxes on production and imports net of subsidies. GDP per capita is derived by dividing GDP by the average total population (i.e. including residents who are not Maltese nationals) for the period under review.
